Self-motivated full stack software engineer with over a decade of experience developing software. Strong problem-solving, analytical and communication skills, with the ability to work effectively as part of a team and alongside clients. Passionate about technology and always eager to continue learning and growing as a professional. I enjoy participating in all stages of software development, from design to implementation.

Skills and Technologies

- | | | | |
|-----------------|-----------------|------------------|--------------|
| • Angular | • React | • TypeScript | • HTML & CSS |
| • SQL and NoSQL | • Python | • .NET Framework | • Java |
| • Node.js | • Elasticsearch | • Docker | • REST API |

Professional Experience

Moody's Analytics

Moody's Analytics provides financial intelligence and analytical tools supporting clients' growth, efficiency and risk management objectives.

Associate Director - Software Engineer

07/2023 – PRESENT

- Currently leading the frontend development of Moody's Copilot, an industry-leading Generative AI tool that enhances employee productivity. Built using the most up-to-date version of Angular (currently Angular v19). As the Engineering Lead, I actively develop new features, shape the platform's direction and mentor software developers.

Asst. Director - Machine Learning

11/2020 – 07/2023

- I led a team of engineers in developing the UI and backend on ML-driven projects that enable users to store, enhance and extract business data. Projects were in the financial risks analytics space using Angular 15, Python and PostgreSQL.
- Developed frontend and API applications from scratch for an internal document analysis tool leveraging OCR and machine learning to extract data from PDFs. Implemented tagging and annotation features to improve model learning from user input. Developed using Angular 11, NestJS, Python, MySQL, Elasticsearch and RabbitMQ.
- Participated in the development of MLFabric, a cloud-based platform that operationalises machine learning models allowing users to deploy and reuse at scale. Developed using Angular 10, NestJS, Elasticsearch and RabbitMQ.

Kin + Carta

Kin and Carta is an innovation and digital transformation consulting firm with clients consisting of Fortune 500 companies.

Senior Technical Analyst

01/2019 – 11/2020

- Played a key part in the development of an event registration system for a luxury automotive company. Frontend developed using Angular 7 and Bootstrap with a heavy focus on UX, backend developed using .NET Framework.
- Guided a team in the re-engineering of a leads-generating system, transforming it into a responsive web application and resulting in additional functionality and scalability. Developed using Angular 8 and Ionic Framework and Java Spring Boot.
- Contributed to modernising a caller verification system for a leading financial services brand. Developed using ReactJS, Redux, GraphQL and Jest for testing.

Freelance

Full Stack Developer

08/2014 – 12/2018

- Collaborated with graphic and web design teams to create responsive user interfaces using JavaScript, jQuery, HTML5, Less CSS and various JavaScript libraries.
- Responsible for the building, maintenance and deployment of front-end and back-office applications for an online entertainment company, using ADO.NET and SQL Server.
- Developed and implemented services and APIs using .NET Framework.

Education

01/2015 – 06/2021

Computer Science Engineering

Universidad de Palermo (Buenos Aires)

Languages
